

Statement of Corporate Identity

GIHMM GmbH
Wienerstraße 70
A-2104 Spillern
Tel.: +43 2266 80216
Fax.: +43 2266 8021612

The radioactivity in the environment is natural and can also be of artificial origin. In addition to the strongly fluctuating natural radioactivity, the metrological task is to record the artificial component both quantitatively and qualitatively.

In the future, radioactivity has to be reckoned with as a potential hazard in our world. Measuring stations for recording environmental radioactivity are being set up around the world in a similar way to meteorology. 40 years of experience in this field are important prerequisites for meeting the high safety standards of such measuring systems and are also appreciated by customers.

The continuous improvement of our devices and facilities, as well as the internal processes, the further training of employees, the intensive support of customers, as well as the improvement of customer satisfaction are characteristics of our company policy. Constant expansion of competencies, in particular through cooperation with university institutes and research facilities, is our ambition.

GIHMM and his team are always available to all customers with a high degree of flexibility and reliable support, thereby providing the necessary security for a relationship of trust based on partnership.

We attach particular importance to accident prevention and the avoidance of injuries to our employees and to creating a pleasant working atmosphere, taking into account flexible working hours for the benefit of maintaining the health of all employees, and we are constantly developing new measures together with the employees.

We confirm that we "work" according to legal principles and that we also take environmental aspects into account in the performance of our work.

Our main principles are:

**"WE SAY WHAT WE DO AND WE DO WHAT WE SAY."
"Quality can not be tested, but must be created."**

Spillern, August 2021

Adelheid Fochler
